easyAIS-IS

Good made better!

The easyAIS-IS is an evolution step forward of the well known easyAIS by Weatherdock AG located in Nurnberg in Germany. This new AIS receiver has an integrated splitter and a signal amplifier to make the usage of AIS data on board much more comfortable.

The easyAIS-IS provides a logical and innovative development of an already excellent product. This shows the philosophy of Weatherdock: always the best and technical feasible for the costumer!

The integrated amplifier eliminates physical losses caused by the splitting process. Because of the in build splitter the easyAIS-IS can be used with several devices at the present VHF antenna at the same time.

In January 2010 the easyAIS-IS was presented by Weatherdock at the BOOT trade fair as a new member of the "easy family".

Since may 2010 the delivery of the easyAIS-IS to specialist shops has started.

The USB port for direct connection to a PC or Plotter will become an additional unique selling preposition for the costumers.
