

easy LOGBOOK

Record your trips – and get a nice printout of great experiences

Functionality

The easyLOGBOOK is a very compact and sensible GPS receiver, which is recording the actual GPS position onto a micro SD card. The recording is made each second. The recorded data can be read out by a computer and can easily be transferred to the LOGBOOK software.

The LOGBOOK software is enclosed. By means of the LOGBOOK software the regular entries can be made in a simple way. The positions of the entry date and time will be synchronized automatically with the recorded longitude and latitude. With a simple click, a real logbook printout can be realized. Crew lists are also just one click away.

Even pictures are synchronized with the entries and finally you can get a printout with your entries, your trip on a map (Google earth map) and your pictures in a very handy way.

Charging the unit is possible through USB, 12 V or 230 V. The easyLOGBOOK is supplied with a 1 GB micro SD card.

What else do I need to use the easyLOGBOOK

The use of the easyLOGBOOK is totally independent from any other equipment. To record the GPS position a clear view to the sky (GPS satellites) is necessary.

Which software fits together with the easyLOGBOOK?

The software of the easyLOGBOOK works with the normal Windows XP® and Windows Vista® versions.

Characteristics

- 12 tracking channels, recording on μ SD card
- Very high sensitivity, superior urban canyon performance
- Handy size

Specification

- Sensitivity: -159 dB
